

MICROBLADING

SPA AND SALON SAFETY CHECKLIST

- The spa/salon is inspected by York Region Public Health
- A green Proof of Public Health Inspection sign is posted at the spa/salon
- The service provider is knowledgeable and experienced in the service they are providing
- The service provider washes their hands before and after each service
- The service provider cleans the area of skin with a skin antiseptic before the service begins
- The service provider checks the client's skin for open cuts, wounds, and signs of infection. If found, service is refused
- The service provider applies skin antiseptic from a single-use packet or onto a cotton swab/cotton ball and then onto the skin
- The service provider wears disposable gloves on both hands during the service and cleans hands immediately after taking off gloves
- Microblades must be single-use, sterile, with lot number and expiry dates
- The service provider sets up supplies and opens packaged, sterile equipment in front of the client just before the service begins. This includes sterilized tools and single-use equipment, which must be used on one person only
- Sharps container must be located at point of use for safe disposal of the sharps
- The following list of items are used on one client only, then thrown away
 - Bandages to cover area
 - Cream applicator
 - Marking pens
 - Microblades
 - Microblading needles/blades
 - Needle cartridges
 - Pigment rings
 - Protective covers
 - Razors/brow shapers
 - Single-use ink caps
 - Single-use personal protective equipment (gloves, masks, gowns, eye protection)
 - Single-use rinse cups
 - Wipes, tissues, and dental bibs

REMEMBER!

Serious infections can be spread during service if these safety practices are not followed.

York Region

- The following list of items are cleaned and disinfected between each client
 - Mapping tools
 - Measuring calipers
 - Reusable metal ink caps
 - Rigid containers used to hold dirty equipment until reprocessing (at end of day)
 - Scissors
 - Service trays
 - Squeeze bottles
 - Tweezers
- Tools and supplies are stored in a clean area (e.g., in covered containers)
- Equipment and surfaces used are in good repair (e.g., no rust, cracks, etc.)
- Service provider provides verbal and written aftercare instructions including infection risks and a recommendation to see a doctor within 24 hours should an infection occur
- Paper liners are thrown out after each use

REMEMBER!

Serious infections can be spread during service if these safety practices are not followed.
